# X-TENDED LIFE HEADER RINGS

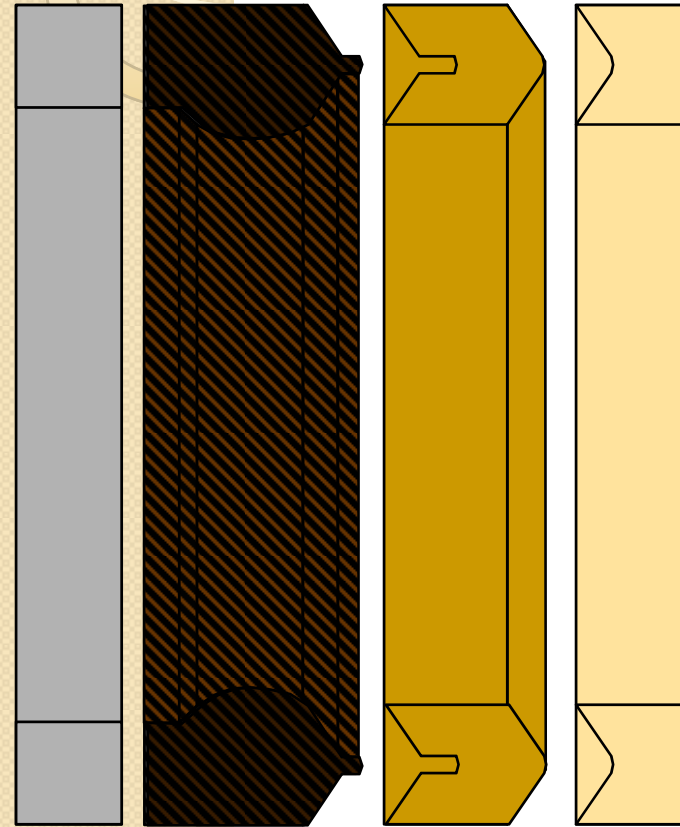

- Fabric Reinforced Header Rings
  - Increases packing set longevity 3-4 times
  - Resists extrusion and nibbling
  - Enhances resistance to abrasive material
  - Resists Explosive Decompression
  - Wipes plungers better, preventing solids from embedding in the pressure rings
  - Maintains packing tension and pre-load resulting in better sealing as packing begins to wear.

# CHEVRON PRESSURE RINGS

- The SuperGold<sup>®</sup> pressure ring was recently introduced for frac-pump service. Testing has demonstrated superior performance and longevity. Sets are available with one or two pressure rings depending on the pump's discharge pressure.
- A female top adapter constructed from PEEK, an engineered plastic is available. This adapter supports the pressure ring and eliminates lantern ring cracking from very high discharge pressures.
- Other materials like HNBR, Viton<sup>®</sup> and Carbon-filled Teflon<sup>®</sup> are available with various fabric reinforcing.

# METAL SPACERS

- Junk rings, lantern rings, and adapters are required to fill the excess space inside the stuffing box. Some of the spacers are drilled or grooved to allow lubrication to reach the packing.
- Metal spacers are specific to each make and model of pump.
